Education

IIT ISM Dhanbad

Integrated Master of Technology in Mathematics and Computing (GPA: 8.86 / 10)

Expected May 2028

Dhanbad, Jharkhand

- **Relevant Coursework:** Data Structures and Algorithms (C++), Probability & Statistics in CS (Python), Linear Algebra, Operating Systems, GPU Computing

Experience

Faun Fleet

Android Developer

Apr 2025 – May 2025

Remote

- Developed a complete Flutter app frontend, resulting in a 20% faster load time
- Implemented all backend integration functions involving API handling for seven key endpoints, enhancing data models, and streamlining services, enabling seamless future connections with backend services for the team.
- Ensured scalable architecture and clean code practices, facilitating easy maintenance and future feature expansion.

VibeNear

Software Developer

July 2025 – August 2025

Remote

- Created application screens using BLoC, GetX and clean architecture principles, ensuring maintainable and scalable code.
- Created 7-8 number of application screens, which improved user navigation scores by 30%.
- Orchestrated the integration of 4 critical backend APIs, ensuring seamless data flow for the user authentication feature and resulting in a 15% increase in user sign-ups.

SPORTS PROGRAMMING

Platform	Handle	Rating	Problems Solved
Codeforces	kunal.3004	1517	500+
CodeChef	kunal2030	1726	150+
LeetCode	kunal_3004	1796	400+

Projects

DeskLink | Flutter (Dart), Go (Golang), WebSocket, WindowsAPI, Goroutines, Concurrency

[Github Link](#)

- Developed a zero-latency remote desktop system using **Go** and **Flutter**, utilizing **WebSockets** for millisecond-level synchronization of input commands.
- Interfaced directly with the **Windows Kernel** (`user32.dll`) via system calls to simulate hardware inputs (mouse/keyboard) and manage OS processes.
- Architected a high-performance **screen mirroring** and file transfer engine using **Goroutines** to handle concurrent data streams efficiently.

Event Edge | Flutter, Node.js, Express, Flask, MongoDB

[Github Link](#)

- Solved the challenge of real-time ticket tracking by implementing a system that handles 100 transactions/min.
- Integrated Flutter frontend with RESTful APIs (Node.js/Express) for seamless event creation and ticketing.
- Built a Flask-based recommender system that provided sales-driven insights, increasing user engagement by 15% through personalized product recommendations.

Technical Skills

Languages: C, C++, Kotlin, Python, XML, Dart, GoLang

Technologies: Android Studio, Retrofit, MongoDB, Flutter, Firebase, Docker, Flask, SQL, Dependency Injection, Riverpod, Bloc, Getx, Adobe Premiere Pro

Concepts: Cache Memory, Machine Learning, Neural Networks, Fragments, Lifecycle Management

Achievements

Secured **3rd place** in our problem statement track at *Hackfest'25*, IIT (ISM) Dhanbad.

Selected as a **Finalist** in the *Accenture Strategy Connect Season 4*.

Social Engagements

Club Member: CYBERLABS (Tech Society at IIT Dhanbad), Lights Camera ISM (Film-making club of IIT Dhanbad)

Sports-Engagements: Athletics
